Application :

Any lamp or small electrical device requiring a 12 volt 'negative earth' D.C supply of up to 100 watts - 7Ah battery, 150 watts - 12Ah battery, and fitted with a cigar lighter or 4 pin XLR type of plug can be operated from the power pack. Your battery may be left partly discharged for a short time but NEVER completely flat. To ignore this warning may result in the need for a new battery. Sealed lead acid batteries must be kept in a charged state and never left to discharge completely. When the light starts to go dim, switch it off. If the battery is left to fully discharge by accident it probably won't be recoverable. All battery packs supplied by Lovegrove Consulting have user replaceable cells. MDS battery have an excellent online store and reasonable prices.
